

All-optical switch loop

Overview

It is composed of a loop amplifier, a multimode interference waveguide amplifier (MMIWA), an input leg, and an output leg. The functions of the MMIWA include input/output power splitting and nonlinear coupling. Feasibility of pulsed-signal operation of all-optical self-switching and cross switching in an all-semiconductor optical-amplifier nonlinear optical loop device is reported. The device, based on a GaAs/AlGaAs quantum-well epitaxial structure, has dimensions of 0. Ultrahigh speed and ultralow energy consumption are two necessary indexes of all-optical switches. The pro-posed flip flop has a fast response, a flat out ut gain, and a short switching-on interval of a few hundreds of picoseconds regardless of the associated. Abstract: We experimentally demonstrate, for the first time, an all-optical switch in a phase-sensitive fiber optic parametric amplifier operated in saturation.

Article Content

A all-optical switching based on highly nonlinear ...

Download Citation | A all-optical switching based on highly nonlinear photonic crystal fiber Sagnac loop mirror | We designed a novel and low switching-power all-optical fiber switch. The highly ...

All-optical switch with ultrahigh switching efficiency and ultralow ...

In this work, we propose an all-optical switch based on one-dimensional (1D) parity-time-symmetric (PT-symmetric) ring optical waveguide network (PTSROWN).

All-Optical Switching Tutorial, Part 1

All-Optical Switching Tutorial, Part 1 A down-to-earth description of all-optical switches * What they are* What they do* How they work

Nonlinear Loop Mirrors for All Optical Switching

Optical fibres have brought an enormous benefit to telecommunications through their very low loss and high bandwidth. At present, these benefits are restricted to point to point transmission, the optical

All-Optical Switching: Past, Present and Future

Applications for all-optical switching have grown recently as performance, cost and reliability have matured. The technology is now poised for wide-scale deployment in both datacenter and telecom

All-optical switching behaviors in an all-semiconductor nonlinear loop ...

We proposed and designed an all-optical 2x2 switch that is based on the MZI, multimode interference, and a nonlinear two-mode interference waveguide. The beam propagation method is

(PDF) Quantum Theory of All-Optical Switching in ...

PDF | Recently, our group demonstrated an ultrafast, low-loss, fiber-loop switch based on a nonlinear Sagnac-interferometer design, using which... | Find, read and cite all the research you

Low power all-optical switching in a nonlinear optical loop mirror ...

All-optical switching is demonstrated using a nonlinear loop mirror containing a low loss As₂S₃ based fibre module. The gate power is reduced to as little as 0.4 W (peak) using a 4 m long

A Review on All-Optical Switching in Intersatellite Laser

This paper introduces the technology of all-optical switching in intersatellite laser communication, including reviews on laser satellite

Integrating all-optical switching with spintronics

The high speed switching and energy efficiency nature grant all-optical switching (AOS) great potential for future photonic integrated spintronic devices. Here the authors demonstrate the ...

All-optical switching behaviors in an all-semiconductor nonlinear loop ...

References (14) Abstract Feasibility of pulsed-signal operation of all-optical self-switching and cross switching in an all-semiconductor optical-amplifier nonlinear optical loop device is reported.

All optical switching and associated technologies: a review

This paper reviews the progressive development of the optical switching technology, highlights the different technologies of all optical gates

Asymmetric optical loop mirror: analysis of an all-optical switch

We present an analysis of the optical loop mirror in which a nonlinear optical element is asymmetrically placed in the loop. This analysis provides a general framework for the operation of a recently

Ultrafast low-energy all-optical switching

The realization of ultrafast integrated opto-optical switches with ultra-low switching energies remains an ongoing challenge. Broadband, silicon-compatible devices relying on gap

Nonlinear loop mirror-based all-optical signal processing in fiber-optic ...

All-optical data processing is expected to play a major role in future optical communications. The fiber nonlinear optical loop mirror (NOLM) is a valuable tool in optical signal processing applications. This

All optical switching and associated technologies: a review

Optical switching is efficiently performed in high speed signal processing by all optical gates. This paper reviews the progressive development of the optical switching technology, highlights the different

Optical Switching using the Nonlinear Optical Loop Mirror

Since the proposal of the nonlinear optical loop mirror (NOLM), or the Sagnac interferometer, about six years ago and its first experimental demonstration , there has been a very rapid progress in the

Analysis of the characteristics of the all-optical switch based on ...

The code translation method for the wavelength-time optical code division multiple access (OCDMA) system based on nonlinear optical loop mirror (NOLM) is proposed.

Femtojoule optical Kerr switching with milliwatt-peak-power in silicon ...

All-optical Kerr switches enable ultrafast switching speeds, essential for next-generation communication and computing. However, their practical deployment is hindered by the intrinsically

All-optical switch based on novel physics effects

In this review, we mainly introduce traditional concepts and methods of realizing an all-optical switch. Then, we detail the new physical applications of parity-time (PT) symmetry,

Multiwavelength all-optical TDM switching using a semiconductor

We report simultaneous all-optical switching of multiple wavelengths using an optical loop mirror with an asymmetrically placed semiconductor optical amplifier.

Magneto-Optic Interferometric Switch With Resonator Configuration

All-optical resonators are candidates for next-generation, integrated, optical switching devices for communication purposes. Their simplicity in design can allow for easy integration using standard

Dynamics of pulse propagation and all-optical switching in a ...

We investigate the dynamics of the pulse propagation and all-optical switching behavior in a closed-loop Y-type four-level atomic medium under the influence of a microwave field and the

Open loop control theory algorithms for high-speed 3D MEMS optical ...

In this paper we show how novel feedforward open loop controls can solve both problems by improving MEMS switching speeds by two orders of magnitude and costs by a factor of three.

All-optical β ip β op based on a symmetric Mach

ion Scien flop AOFF based on a symmetric Mach-Zehnder switch with a feedback loop and multiple forward set/reset signals is presented. The pro-posed flip flop has a fast response, a flat out ut gain,

All-optical switch based on novel physics effects

All-optical switches are among the most important parts of integrated photonics. Ultrahigh speed and ultralow energy consumption are two necessary indexes of all-optical switches.

Phase-sensitive fiber-based parametric all-optical switch

Abstract: We experimentally demonstrate, for the first time, an all-optical switch in a phase-sensitive fiber optic parametric amplifier operated in saturation.

Optical Switching Basics: Types and Technologies

Explore the fundamentals of optical switching, including space, wavelength, time, and hybrid switching techniques. Learn about core components and applications.
