

Cable clips for securing cables inside cable trays

AI Overview

Cable tray clips are essential accessories that secure cables or tray lids, offering stability, fire safety compliance, and corrosion resistance.

Types of Cable Tray Clips

- Standard Cable Tray Clips** These clips attach cables directly to metal or wire mesh trays, keeping them organized and preventing sagging. They are available in various sizes to accommodate light, medium, and heavy-duty trays, and are suitable for industrial, telecom, and data center environments (Marshall-Tufflex).
- Lid Clips for Heavy-Duty Trays** Designed to secure tray lids, these clips are typically made from hot-dip galvanized steel for corrosion resistance and long-term durability. They are recommended at 4-6 clips per lid section for secure fastening, especially in outdoor or high-vibration environments (Direct Channel).
- Hold-Down Clips** Used in areas with vibration or movement, hold-down clips stabilize the tray itself, preventing displacement and maintaining a consistent cable layout (Channel and Tray).

Materials and Durability

- Plastic Clips:** Lightweight and easy to install, but may fail under high heat or fire conditions.
- Metal Clips:** Stainless steel or hot-dip galvanized steel clips provide excellent corrosion resistance and mechanical strength, suitable for heavy-duty or outdoor applications.

Installation and Compliance

Many clips, such as LINIAN cable tray clips, are designed for tool-free installation, locking into place by hand, which reduces installation time and ensures compliance with fire safety regulations like BS 7671:2008+A3:2015. For hanging or suspended trays, clips may require threaded rods, nuts, and washers to secure the tray from ceilings or supports.

Selection Tips

- Tray Depth and Width:** Ensure the clip matches the tray dimensions (e.g., 50mm, 75mm, 100mm, 150mm, 225mm).
- Load Requirements:** Consider the weight of cables and trays; some systems support up to 280 lbs per foot with proper...
