

Complete List of Metal Mesh Cable Tray Models and Prices

AI Overview

Metal mesh (wire mesh) cable trays typically cost between \$10 and \$25 per meter, depending on material, size, and finish. Price Range and Materials Wire mesh cable trays are generally the most affordable metal tray option, designed for lightweight cabling such as data or internet cables in offices and data centers. The cost per meter varies based on the material:

- Pre-Galvanized Steel (PG): Most economical, suitable for dry indoor environments like offices or schools.
- Hot-Dip Galvanized Steel (HDG): More expensive due to thicker zinc coating, ideal for outdoor or industrial areas to prevent corrosion.
- Aluminum: Lightweight and rust-resistant, slightly higher cost but reduces the need for heavy supports.
- Stainless Steel: Highest cost, used in hygienic or corrosive environments such as food plants or coastal areas.

Typical prices for wire mesh trays range from \$10 to \$25 per meter, with bulk orders potentially reducing the cost.

Factors Affecting Cost Several factors influence the final price:

- Tray size and dimensions: Larger trays or those with higher load capacity cost more.
- Coating and finish: HDG or powder-coated trays increase durability but raise the price.
- Installation complexity: Labour, supports, and fittings can add significantly to the total project cost.
- Accessories: Bends, tees, risers, and covers may increase the overall expense.
- Shipping: Heavier trays or long-distance delivery can add to the cost.

Cost Comparison Compared to ladder or solid-bottom trays, wire mesh trays are lighter, easier to cut, and faster to install, which can save 40–60% of total project costs in some cases. They also provide excellent ventilation for cables, reducing heat buildup and maintenance issues.

Practical Tips For indoor office or data center installations, pre-galvanized wire mesh trays are usually sufficient and cost-effective. For outdoor or industrial environments, consider HDG or aluminum trays t...
