

Diode Laser Selection

Overview

Selecting the right laser diode module is an engineering decision that directly impacts system performance, reliability, and long-term operating costs. Manufacturers can upload their data sheets free of charge. This allows users to compare laser diodes from all. Diode lasers (or laser diodes) are semiconductor lasers which use electrical power as an energy source and doped p-n junctions as a gain medium. As discussed in the Lasers Selection Guide, all lasers consist of three components: an energy source (or pump), a gain medium, and an optical resonator;. Laser diodes, which are capable of converting electrical current into light, are available from Thorlabs with center wavelengths in the 375 - 2000 nm range and output powers from 0. We also offer Quantum Cascade Lasers (QCLs) and Interband Cascade Lasers (ICLs) with center. The purpose of this laser diode tutorial is to provide the information necessary to create a long lifetime, stable laser diode system. Controlled Module CNI Laser - Wide Temp.
