

Do home switches need optical ports

Overview

To meet these growing bandwidth requirements, access switches must have optical downlink ports. These ports can then use optical fibers that offer a higher transmission rate for access, achieving fiber to the room. A switch with fiber optic ports, often referred to as a fiber optic switch, is a network device that contains both traditional Ethernet ports (usually copper RJ45 ports) and fiber optic ports. Port types are limited to two: optical and Ethernet. My house finally got connected to fiber optics ethernet! My setup is as follows: Fiber Optic Cable comes from the pull upside the house and goes through the wall into a box --> fiber optic cable connects to my router (HT-178AX) via SFP cage --> "Cat 5e LAN cable" connects to a 1GB RJ45 socket on the. Choosing the right switch port types isn't just about what fits; it can impact your network's performance, cost, and scalability. In this guide, we'll break down the key differences between switch port Ethernet (RJ45) and switch port SFP to help you make an informed decision. We will look at data rates, functions, and network architecture.
