

Does Saudi Arabia use cable trays

AI Overview

Yes, Saudi Arabia extensively uses cable trays for electrical installations, following both local and international standards.

Overview of Cable Tray Use Cable trays are widely implemented in Saudi Arabia for power, control, and signal cable management in substations, industrial facilities, and commercial buildings. The Saudi Electricity Company (SEC) standards, along with IEC and SASO regulations, guide the design, material selection, and installation of cable trays. They are essential for managing high-voltage (HV), medium-voltage (MV), and low-voltage (LV) cables, especially in the country's hot and dusty climate.

Common Types of Cable Trays

- Ladder Type:** Most commonly used for MV and HV power cables due to superior ventilation, which is critical in high-temperature regions like Riyadh and Jeddah.
- Perforated Tray:** Used for LV and control cables, offering moderate ventilation and support.
- Solid Bottom Tray:** Provides protection against dust and sand, suitable for desert or industrial zones.

Materials and Durability Saudi installations often use hot-dip galvanized steel (HDG) for corrosion resistance, stainless steel in coastal areas, and aluminum for lightweight applications. FRP (fiber-reinforced plastic) trays are also available for highly corrosive environments. Material selection considers heat, dust, humidity, and potential exposure to seawater.

Installation Practices

- Fill Capacity:** Typically 40–60% to allow heat dissipation and future expansion.
- Support Spacing:** Horizontal spans up to 1.5–3 m depending on cable weight; vertical runs up to 2.4 m.
- Cable Segregation:** Power and control cables are separated to prevent electromagnetic interference (EMI).
- Grounding and Bonding:** Metallic trays must be properly grounded and bonded continuously to avoid signal disturbances.

Accessories: Include covers, dropouts, clamps, and expansion joints to ensure complete and safe cable management.

Compliance and Standards Cable trays in Saudi Arabia comply with SEC Clause 5.14, SASO IEC 61537, and sometimes NEMA VE-1/VE-2 standards. These standards ensu...
