However, when it comes to connecting multiple switches, things can get a bit more complicated. Can you link them together?

The short answer is yes, but there are. PoE Switch are a networking device that are able to give power through the same Ethernet cable that is being used for data transmission. Connect the Cat6 cable to the LAN port on each switch, and then configure the switches to communicate with each other by configuring VLANs, setting up QoS policies, and other settings as needed. Using PoE can improve flexible options for placing Ethernet end devices, and reduce the time and expense of installing electrical.
