

Fire-retardant cable trays supplied in Democratic Republic of Congo

AI Overview

Fire-retardant cable trays, including fiberglass (FRP/GRP) and polyester-based systems, are available from multiple suppliers in the Democratic Republic of Congo for industrial and commercial applications.

Types and Materials

Fire-retardant cable trays in the DRC are primarily available in the following types:

- Fiberglass Reinforced Plastic (FRP/GRP) Cable Trays:** These trays are made from pultruded fiberglass sections with fire-retardant polyester (FR-P) or vinyl ester (FR-VE) resin systems, providing excellent resistance to fire, corrosion, and harsh chemical environments.
- Ladder Cable Trays:** Typically made from steel or PVC with corrosion-resistant coatings, these trays support electrical, control, and fiber optic cables while offering fire-retardant options depending on the material used.

Key Features

- Fire Resistance:** FR-P and FR-VE resin systems ensure trays are fire-retardant, suitable for industrial environments like power plants, refineries, and commercial buildings.
- Corrosion Protection:** Fiberglass trays incorporate a synthetic veil and resin-rich surface layer to resist corrosive atmospheres, extending service life.
- Durability and Load Capacity:** Trays are designed to support static cable loads with standard support spans of 8, 10, or 12 feet, and are available in thicknesses from 1.2 mm to 3.0 mm and widths from 50 mm to 1000 mm.
- Customizable and Modular:** Many suppliers offer pre-fabricated bends, tees, reducers, and coupler plates, allowing easy installation and future expansion.

Applications

Fire-retardant cable trays are suitable for:

- Industrial plants (cement, fertilizer, and chemical industries)
- Power generation and distribution facilities
- Commercial buildings and malls
- Laboratories and data centers
