What It Is A distribution box, also called a consumer unit, electrical panel, or load center, is a metal enclosure that houses circuit breakers or fuses. It receives incoming power from the utility and divides it into multiple smaller circuits that supply electricity to different areas or appliances in your home. Typical Configuration A well-designed household distribution box usually includes: Main Switch: Controls the entire electrical system. Room Socket Circuits: Separate circuits for each room to isolate faults. High-Power Appliance Circuits: Dedicated circuits for stoves, air conditioners, or water heaters. Lighting Circuits: Independent circuits for stable operation of lights. Types of Distribution Boxes Standard Consumer Units: Single main switch with multiple circuit breakers. Dual RCD Units: Two banks of circuits, each protected by a residual current device. High-Integrity Units: Suitable for larger homes with many sub-circuits, combining dual RCDs with additional RCBOs. Smart Panels: Modern units with digital monitoring, remote control, energy tracking, and integration with solar panels or EV chargers. Choosing the Right Box Circuit Cou...
