

[illegible]

IP65-rated hot channels and enclosures are available now in both aluminum LED profiles and hot-dip galvanized electrical boxes for outdoor and industrial use.

LED Profile Channels Waterproof IP65 LED aluminum profiles are designed for outdoor, underground, or moisture-prone areas such as driveways, walkways, gardens, bathrooms, and kitchens. These channels protect LED strips from water and dust while acting as a heat sink to extend LED lifespan. They are typically made from 6063-T5 aluminum with a PC cover that is flame-retardant, chemical-resistant, and durable. Kits often include end caps, clips, and suspended cables, and are available in lengths of 2 meters, 2.5 meters, or 3 meters, ready for installation.

Hot-Dip Galvanized IP65 Enclosures For electrical and industrial applications, hot-dip galvanized (HDG) IP65 enclosures provide robust protection against dust and low-pressure water jets. These enclosures are ideal for outdoor, industrial, and high-moisture environments, housing electrical fixtures, sensors, IoT devices, or automation components. The hot-dip galvanization process ensures exceptional corrosion resistance, extending the lifespan even in harsh weather. Proper sealing with IP65-rated glands is recommended to maintain protection.

Key Features

- IP65 Rating:** Dust-tight and resistant to water jets from any direction.
- Materials:** Aluminum for LED channels; steel with zinc coating for HDG enclosures.
- Applications:** Outdoor lighting, industrial control systems, electrical wiring protection, and commercial installations.
- Installation:** Most LED profiles come as complete kits for easy DIY installation; enclosures may require proper sealing for optimal performance.
- Availability:** Many suppliers offer next-day delivery or warehouse stock for immediate purchase.

Whether you need a decorative LED channel for outdoor lighting or a durable electrical enclosure for industrial use, IP65-rated hot channels are currently available and ready for deployment.
