

How far is the fiber optic cable from the house

Overview

Single-mode fiber (SMF) supports distances up to 40-100+ kilometers for standard applications, while multimode fiber (MMF) is typically limited to 300 meters to 2 kilometers. The actual distance depends on factors including fiber type, wavelength, network equipment, and signal. Many factors decide the fiber cable distance, but the key factors include the below six aspects. Attenuation First is the attenuation of the optical fiber. The greater the distance, the greater. That's where range comes in. Understanding fiber optic cable range helps you plan and install, as well as upgrade your network without hiccups. Single-mode. Then I would like the cabling run either 7 metres or 4 metres (depending on whether the box is installed at ground level or not, as if it is then the cable will be need to ran up and down the inside door) to reach the near double power socket.
