

## How long is a roll of 48-core optical cable

### AI Overview

A standard 48-core optical fiber cable roll typically ranges from 1,000 feet ( $\approx 305$  meters) to 2 kilometers in length, with the roll diameter varying by cable type and armor, usually around 0.3–0.5 meters.

**Length of 48-Core Cable Rolls**

**Indoor/Outdoor Plenum Cable:** Often supplied on 1,000-foot ( $\approx 305$  m) drums for singlemode 48-strand fiber, suitable for long-distance runs in buildings or campus backbones.

**Steel-Armored Multi-Tube Cable:** Commonly sold in 2,000-meter reels for OM3 multimode 48-core cables, designed for high-capacity industrial or telecom networks.

**Non-Metallic Armored Singlemode Cable:** Some specialized 48-core cables, such as Brand Rex LUL-approved, come in 2 km reels for large-scale installations.

**Width and Diameter of Cable Rolls**

The roll diameter depends on the cable construction: Armored or steel-jacketed cables are thicker and heavier, typically resulting in a roll diameter of 0.4–0.5 meters. Non-armored or plenum-rated cables are thinner, with roll diameters around 0.3–0.4 meters. The cable itself usually has a diameter of 8–20 mm, depending on the number of tubes, fiber type, and armor layers.

**Summary**

**Length:** 305 m (1,000 ft) to 2,000 m (2 km), depending on manufacturer and cable type.

**Roll Diameter:** Approximately 0.3–0.5 meters.

**Cable Diameter:** Typically 8–20 mm, influenced by armor and tube configuration. These dimensions are standard for 48-core optical fiber cables used in industrial, telecom, and data center applications, but exact measurements may vary by manufacturer and specific cable design.
