

How to ground fiber optic cables in a computer room

Overview

Follow the J-STD-607-A and TIA-942 standards and place a grounding bar in each data center, telecommunications room, etc. Fiber optic cable transmits data as light through glass or plastic strands, which means the fiber core itself carries no electrical current and requires no grounding. The critical distinction lies in. This Applications Engineering Note (AE Note) discusses conventional bonding and grounding practices for conductive fiber optic cable and hardware installations within the scope of the National Electrical Code (NEC). Those risks are possible serious injury, fire, and even death. Are Bonding and Grounding the Same Thing?

Nope. In fact. The simplest way to design a network that avoids traditional copper cabling problems and the additional associated costs is to choose an all-dielectric fiber optic cable.
