

Optical Module 12

Overview

SNAP12 is a 12-channel pluggable parallel optical transmitter or receiver module with an MSA standard chassis mountable MPO interface. These modules are well suited for high-bandwidth commercial aerospace systems with the added benefit of reducing aircraft wiring and system. XPO represents a new class of optical pluggable module designed specifically for next-generation AI data center fabrics. The earliest SNAP12 dates back to around 2002, when the SNAP12. Plug & Play™ universal systems modules are used to break out the 12-fibre MTP® connectors on trunk cables into LC or SC duplex connectors to facilitate patching into system equipment ports, patch panels, or work area outlets. LC duplex adapters feature hinged VFL-compatible shutters that move up. An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications. These agreements—Open CPX, OCI, and the headline-making XPO MSA—aim to.
