

## Photometric power meter without switch

### Overview

The power meter converts the optical signal with high resolution and extremely high bandwidth (20 kHz) into a voltage signal. It operates in a wide wavelength range from 400 nm - 1550 nm and, therefore, enables work in the visible and infrared ranges without switching. Are there inexpensive solutions like the E2206 with the option to (physically or permanently) disable the switch, possibly through an alternative firmware?

As far as I'm concerned, there are currently three main options: I have a Shelly PM Mini Gen3 and multiple Athom no-relay ESPHome plugs. The output is a voltage linearly proportional to the input power., waveguides/diodes) to peripherals (e. I tried 2 different types of zigbee power plugs and with both i had problems, that the switch turned off by itself mid running of the machine. Ideally suited for industrial, scientific, and medical.
