Function: Connection point for all devices on a segment of segment of a network that breaks down and absorbs the data flow between all of the connected devices rather than flooding it to all connected devices. Fault Tolerance and High. Multi-Chassis Link Aggregation (MC-LAG) pairs two switches for seamless redundancy and load balancing. Downstream devices link to both, spreading traffic and failing over instantly in the event of switch or fiber failure. Expand your access layer with UniFi Enterprise Campus switches. It has advanced hardware and software architecture design, built-in modular 1+1 AC redundant power supplies, 3+1 redundant fans, cross ventilation and wind direction adjustable. It is ideal for high-density aggregation in. With AXIS D8308 Fiber Aggregation Switch you can connect multiple Axis devices using fiber midspans over long distances.
