

Power of the front shelf

Overview

Research from IGD reveals 37% of your customers will buy an alternative brand if they can't easily see their chosen product on shelf. Similarly, retail trials show presenting your product continuously at the front of the shelf can increase sales by up to 20%, with an average. Shelf positioning refers to the strategic placement of products on retail shelves to maximize visibility, influence buying decisions, and increase sales. The right facing ensures that the product is well-merchandised and highly visible to customers. A well-merchandised product catches the shopper's eye, increasing the likelihood of a purchase. ProfitPusher 2 is a reliable workhorse that has been increasing sales and saving retailers. @Front replaces traditional slip-mat and spring-pusher options, giving you a more efficient, user-friendly solution for auto facing, fronting, and filling your display. It also has a second meaning that matters.
