

Price of adding a panel to a distribution box

AI Overview

Adding a panel to a distribution box typically costs between \$200 and \$1,500 for a standard residential installation, depending on amperage, labor, and permits.

Cost Breakdown

Material Costs: The cost of the panel itself depends on amperage and the number of breaker spaces. For example, a 100-125A panel may cost \$200-\$500, while a 200A panel can range from \$500-\$1,000. Each additional breaker space usually adds around \$5 per slot.

Labor Costs: Hiring a licensed electrician is mandatory. Labor rates vary by region and complexity, typically ranging from \$50 to \$150 per hour. A simple panel addition may take 2-4 hours, while more complex installations with rewiring or relocation can take a full day.

Permit and Inspection Fees: Most municipalities require permits for panel work, which can cost \$100-\$300. Additional inspections or code upgrades may increase this cost.

Additional Factors: Costs can rise if: The panel is outdoors or in a hard-to-access location Wiring needs to be extended or rerouted A meter socket replacement or service upgrade is required Smart panels or surge protection are added

Typical Price Ranges

Small addition (100A, indoor, minimal wiring): \$200-\$600

Mid-range addition (100-200A, moderate wiring, permit included): \$600-\$1,200

High-end or complex addition (200A, outdoor, rewiring, smart panel): \$1,200-\$1,500+

Regional differences can affect pricing. Urban areas often have higher labor and permit costs, while rural areas may save on labor but incur transport fees for specialized panels.

Key Takeaways Adding a panel to a distribution box is a moderate investment that ensures electrical safety and capacity for additional circuits. Costs are influenced by panel size, amperage, labor complexity, permits, and location. Always hire a licensed electrician to comply with code and ensure safety.
