

Reset the fiber optic router

AI Overview

You can reset your fiber optic router by performing either a soft restart or a hard factory reset, depending on the severity of your connectivity issues.

Soft Reset (Restart)

A soft reset is a simple way to clear minor glitches without erasing your settings:

- Power off the router:** Use the power button or unplug the power cable from the router.
- Wait:** Pause for 30–60 seconds to allow the router to clear its memory and temporary errors.
- Power on the router:** Plug it back in or press the power button.
- Check the lights:** Wait until all indicator lights stabilize, indicating the router is fully powered and ready.
- Test your connection:** Open a webpage or stream a video to ensure the internet is working properly.

Hard Reset (Factory Reset)

A hard reset restores the router to its original factory settings, erasing Wi-Fi names, passwords, and custom configurations:

- Locate the reset button:** Usually a small recessed button on the back or bottom of the router. You may need a pin or paperclip to press it.
- Power off the router:** Unplug the power cable or switch off the device.
- Press and hold the reset button:** Keep it pressed for 10–15 seconds until the router's lights start flashing or it begins to reboot.
- Power on the router:** Some routers require you to continue holding the button while powering on; check your device instructions.
- Release the button:** After the specified time, release the button and allow the router to complete the reboot.
- Reconfigure network settings:** You will need to set up your Wi-Fi name (SSID), password, and any other custom settings again.

Additional Tips

- Wait for stabilization:** After any reset, give the router a few minutes for all lights to stabilize before testing connectivity.
- Use the app if available:** Some fiber providers, like Google Fiber, allow you to restart or reset the router via their app, which can simplify the process.
- Troubleshoot first:** Check your internet speed and connectivity before performing a hard reset, as a soft restart often resolves most issues.

By following these steps, you can refresh your fiber optic router, resolve sof...
