

Specific for cable tray engineering

Overview

The International Electrotechnical Commission (IEC) provides detailed guidelines for cable tray systems under IEC 61537. This standard outlines the construction requirements, testing methods, and performance parameters for cable trays and related support systems. Choosing the right cable tray ensures that the entire system operates smoothly, while minimizing long-term maintenance. Most projects are roughly defined at the start of cable tray design. The selection of material and finish is a function of the environment in which it is used in a wide range. Is your cable tray system optimized for safety, dependability, space and cost savings?

Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and industrial applications. OBO BETTERMANN has offered products and solutions for electrical installation for over 100 years.
