

Switch Electrical Port to Optical Port Module

AI Overview

To connect an electrical RJ45 port to an optical SFP port, use a compatible electrical-to-optical SFP module or switch the combo port to optical mode, then insert the module and connect the appropriate cable. Using a Gigabit Electrical Port Module:

- Select the Module:** Choose a Gigabit electrical port module (e.g., ES-T1-R for 1000M or ES-T2-R for 10/100/1000M adaptive) that converts an SFP optical port to an RJ45 electrical port.
- Insert the Module:** Plug the electrical port module into the SFP optical port on your switch or router.
- Connect the Cable:** Attach a Category 5e/6 UTP cable from the RJ45 port to the network device. For 10G SFP+ modules, use Cat6A or Cat7 cables for stable 10G performance up to 30 meters.
- Plug-and-Play:** These modules typically support auto-negotiation and full-duplex transmission, requiring no additional configuration.
- Configuring Combo Ports:**
 - Identify the Combo Port:** Combo ports have both an electrical and optical interface sharing a single forwarding channel. Only one port can be active at a time.
 - Switch to Optical Mode:** On devices like Huawei routers, enter the interface view and run: `combo enable fiber` to activate the optical port. `undo combo enable fiber` to revert to electrical mode.
 - Verify Peer Configuration:** Ensure the connected device's port is also set to the same mode.
 - Insert SFP Module:** Once optical mode is enabled, insert the SFP transceiver into the port, aligning TX/RX labels with the fiber cable.
- Installing SFP Modules:**
 - Check Compatibility:** Confirm the SFP module matches the port type, speed, and fiber type (single-mode or multi-mode).
 - Insert Module:** Align the module with the SFP port and gently push until it clicks; a latch will secure it.
 - Connect Fiber or DAC Cable:** For duplex LC fiber, connect TX to TX and RX to RX. For MPO/MTP cables, use breakout cables and ensure correct polarity.
 - Power Up and Test:** Check link status LEDs and v...
