

**The back panel of the distribution box
has no opening**

Overview

It can occur due to overloaded circuits, short circuits, or ground faults. Solution:
Identify the Cause: Check if the breaker is tripping due to overloading. This often happens when too many devices are plugged into one circuit. Reducing the load on the circuit or redistributing. The openings in the sides and back of a panel box, called knockouts, are also required to be sealed if not used.
