

What are the connectors used for power communication fiber optic cables

Overview

Discover all major fiber optic connector types, including SC, LC, FC, ST, MPO, and hardened connectors. Optimize your fiber network with expert insights. A fiber optic connector is a mechanical device used to align and join optical fibers, enabling light to pass through with minimal loss. Unlike fiber splicing, which is permanent, connectors allow for easy connection and disconnection of cables, making them ideal for maintenance and flexibility in. The fiber connector types, sometimes referred to as terminations, link fiber optic cables together through terminals, switches, adapters, and patch panels, by bridging the gap between their internal glass fibers that transmit the data down the length of the cable. However, with several connector types available, each with unique designs and uses, it's important to understand which one fits your application best.
