

What does four ports mean in the context of a fiber optic terminal box

Overview

Fixed Wireless NTDs and some FTTP NTDs have 4 ports on the underside labelled 1-4. Your internet service is connected to just one of these ports (you can have other. The new four port FTTP connection box allows you to order up to four separate services from the same or different service providers through one connection box, and connect up to four routers. There are several lights on the ONT, when these lights change colour or flash, it means something is happening. This can be particularly useful for businesses that want separate networks for staff and customers, or households that. What is a 4-port network switch, and how does it work?
