

When should you replace the pigtail hose

AI Overview

Pigtail hoses should generally be replaced every 5 years, while stainless steel pigtails can last up to 20 years. Replacement Guidelines Rubber Pigtails: It is recommended to replace rubber pigtails every 5 years. This is due to the deterioration of the rubber material over time, which can lead to safety hazards if not replaced. Stainless Steel Pigtails: Stainless steel pigtails have a longer lifespan and can typically last up to 20 years. They are less susceptible to wear and tear compared to rubber hoses, thanks to their durable construction. General Recommendations: Always check the date of manufacture on the pigtail hose. The usual recommendation for replacement refers to 5 years from this date, not from the date of installation. Regularly inspect hoses for any signs of wear, damage, or deterioration. If any visual defects are apparent, the hoses should be replaced immediately. Usage Conditions: The lifespan of pigtail hoses can also be affected by environmental conditions. Hoses exposed to harsh weather or extreme temperatures may need to be replaced sooner than the recommended intervals. By adhering to these guidelines, you can ensure the safety and reliability of your gas system. Regular maintenance and timely replacement of pigtail hoses are crucial for preventing leaks and ensuring safe operation.
