

Where to buy communication optical fiber cables and their prices

AI Overview

Fiber optic cable prices range from \$0.09 to \$6 per foot depending on type, strand count, and construction, with single-mode generally cheaper than multimode.

General Pricing Overview

- Retail prices: \$1 to \$6 per linear foot depending on fiber count and cable type.
- Wholesale bulk purchases: \$0.09 to \$1.52 per foot.
- Single-core FTTH drop cable: Approximately \$0.13 per foot.
- High-count backbone cables (e.g., 288 strands): Up to \$6 per foot or more.

Pricing by Fiber Type

- Single-mode fiber (OS1/OS2): \$0.10 to \$0.50 per foot for the cable itself; ideal for long-distance communication.
- Multimode fiber (OM1, OM2, OM3, OM4): \$0.30 to \$1.00 per foot; suitable for shorter distances and in-building networks.

Pricing by Strand Count

- 12-strand cable: Around \$0.50 per foot.
- 24-strand cable: Approximately \$1.00 per foot.
- Higher strand counts increase costs proportionally.

Construction and Rating

- Indoor riser-rated cables: Lower cost, suitable for vertical runs between floors.
- Plenum-rated cables (OFNP): Higher cost, required for air-handling spaces due to fire safety standards.
- Armored or direct-burial cables: \$0.50 to \$5 per foot, designed for harsh environments.

Pre-Terminated Assemblies and Patch Cables

- Factory-terminated cables with connectors cost more than raw cable, with prices varying by connector type and fiber count.

Market Trends

- Recent market data from China shows a price surge in single-mode fiber in early 2026, reflecting global supply constraints.
- Prices for G.652D single-mode fiber have increased significantly, affecting finished cable costs, especially for patch cables and indoor assemblies.

Additional Considerations

- Installation costs: Underground or complex installations are more expensive than aerial or indoor runs.
- Material choice: Glass fiber cores are standard for high-speed, long-distance applications, while plastic optical fiber is cheaper but less performant.
- Longevity: Fiber optic networks typically last 20+ years.
